Mandatory Assignment:

SimplifyMoney App – User Feedback Report

Objective:
To gather brutally honest feedback from 3 users about usability, login/authentication, and security flows in the SimplifyMoney app.

User 1 Feedback

Profile: Student (Age 22)

Observations:

- Login design confusing; if 1 user is logged in, second user can log in automatically without first user authentication, causing the first user to be silently logged out.
- OTP for login takes too long after multiple login/logout attempts on the same device.
- Password change possible without proper authentication.
- Biometric login (fingerprint) works automatically without prompting, and if MPIN is set, it can override the fingerprint, causing confusion.
- Difficult to understand the app's working and navigation initially.

User 2 Feedback

Profile: Working Professional (Age 24)

Observations:

- Multiple login/logout attempts create delays in OTP delivery.
- Change user/login flow is not clear; first user is logged out silently.
- Biometric login overrides other authentication methods unexpectedly.
- App navigation is not intuitive; difficult to figure out where to start investing or buy/sell.

User 3 Feedback

Profile: Beginner Investor

Observations:

- Login/authentication process is confusing.
- Automatic logout of first user without notification creates concern.
- Biometric and MPIN flows interfere with each other; not clear when fingerprint or MPIN is active.
- Difficult to understand app features and flow; no clear onboarding or guidance for new users.

Common Issues Identified

1. Session handling issues: Silent logout of first user, automatic login without authentication.
2. OTP delay during multiple login/logout attempts.
3. Biometric/MPIN authentication inconsistencies.
4. App navigation and feature understanding is difficult for new users.

Suggestions for Improvement

- Add confirmation before logging out the first user when another user logs in.
- Improve OTP delivery reliability.
- Ensure biometric/MPIN flows do not override each other unexpectedly.
- Provide onboarding/tutorial for first-time users to understand app flow and features.

QA Engineer Assignment:

Company : SimplifyMoney

1. Approach

- Explored the application as a real user
- Tested key flows: Buy, Sell, Gift, and SIP
- Used both valid and invalid inputs
- Focused on functional testing and edge cases
- Captured issues with screenshots

2. Test Scenarios

Buy Flow

- Tested with valid and invalid amounts
- Checked input validation and transaction behavior

Sell Flow

- Tested selling with insufficient balance
- Verified system response and restrictions

Gift Flow

- Tested referral functionality with valid inputs
- Observed system response for normal usage

SIP Flow

- Tested SIP setup with different inputs
- Verified OTP and completion flow

3. Bugs Identified

Bug 1: Security Issue (Biometric)

- Fingerprint settings changed without proper re-authentication

4. Suggestions

- Improve OTP reliability and error messaging
- Add confirmation before switching users
- Improve clarity in referral error messages
- Enhance security checks for biometric settings

5. Challenges Faced

- OTP delays during testing
- Difficulty identifying consistent behavior due to intermittent issues

6. Deployment / Execution Notes

- Tested on mobile device
- Used stable internet connection
- Re-tested flows multiple times for consistency

Flow: Buy

Result: No bug found

Details:
Buy flow tested with valid scenarios. No functional issue observed.

Flow: Sell

Result: No bug found

Details:
Sell flow tested under normal conditions. No functional bug identified.

Flow: Gift

Result: No bug found

Details:
Gift / referral functionality tested with normal usage. No functional issue observed.

Flow: SIP

Bug: OTP Delay During SIP / Login After Multiple Attempts

Test Scenario: User tries multiple login/SIP attempts

Steps to Reproduce:

1. Attempt login multiple times using same device
2. Request OTP repeatedly
3. Try to proceed

Expected Result:
OTP should be received instantly or within expected time

Actual Result:
OTP is delayed after multiple attempts

Impact:
User experiences delay in completing login or SIP setup

Severity: Medium

TEST CASES

1. Buy Flow Test Case

Test Case ID: TC_1
Test Scenario: Verify user can buy successfully

Steps:

1. Open app
2. Go to Buy section
3. Enter valid amount
4. Click on Buy

Expected Result:
Transaction should complete successfully

Actual Result:
Working as expected

Status: Pass

2. Sell Flow Test Case

Test Case ID: TC_2
Test Scenario: Verify user can sell assets

Steps:

1. Open app
2. Go to Sell section
3. Enter valid quantity
4. Click Sell

Expected Result:
Sell transaction should complete

Actual Result:
Working as expected

Status: Pass

3. Gift Flow Test Case

Test Case ID: TC_3
Test Scenario: Verify referral/gift functionality

Steps:

1. Open Gift section
2. Enter valid referral details
3. Submit

Expected Result:
Referral should be accepted

Actual Result:
Working as expected

Status: Pass

4. SIP Flow Test Case

Test Case ID: TC_4
Test Scenario: Verify SIP creation

Steps:

1. Open SIP section
2. Enter valid amount
3. Select date
4. Proceed

Expected Result:
OTP should be received and SIP created

Actual Result:
OTP delayed after multiple attempts

Status: Fail

5. Login Test Case (OTP Behavior)

Test Case ID: TC_5
Test Scenario: Verify OTP delivery

Steps:

1. Enter mobile number
2. Request OTP multiple times

Expected Result:
OTP should be delivered promptly

Actual Result:
OTP delayed after multiple attempts

Status: Fail

6. User Switch Test Case

Test Case ID: TC_6
Test Scenario: Switching between users

Steps:

1. Login with User A
2. Login with User B

Expected Result:
System should ask for confirmation

Actual Result:
User A logged out without notification

Status: Fail

TEST SCENARIOS

Buy Flow Scenarios

- Verify user can buy with valid amount
- Verify system rejects invalid amount
- Verify buy flow works with slow internet
- Verify error message on failed transaction

Sell Flow Scenarios

- Verify user can sell with valid balance
- Verify system restricts selling more than available balance
- Verify proper error message on invalid input
- Verify transaction success message

Gift Flow Scenarios

- Verify user can access referral section
- Verify referral works with valid input
- Verify system handles invalid referral gracefully
- Verify error message is shown properly

SIP Flow Scenarios

- Verify user can create SIP with valid details
- Verify system enforces minimum investment amount
- Verify OTP is triggered during SIP setup

- Verify SIP creation fails gracefully when OTP is delayed

Login / Authentication Scenarios

- Verify user can login with valid OTP
- Verify OTP is received on time
- Verify system behavior on multiple OTP requests
- Verify session persists after login

User Management Scenarios

- Verify switching between users
- Verify logout behavior
- Verify system shows proper message during user switch

SUGGESTIONS

1. Add Rate Limit Message

- If user requests OTP multiple times
  Show message like:
  Too many attempts, please try again later

2. User Switch Confirmation

- When switching users
  Show confirmation popup:
  Are you sure you want to switch account?

Prevents confusion

3. Improve Error Messages

- Replace generic errors with clear messages
- Example:
  Something went wrong
  Unable to process request, please try again later
